The basis for this project was the code I wrote for Exercise 2, wherein I made a program that switched images of CDs when you clicked on them. I decided to upgrade this concept by creating a makeshift music player that "skips" forwards/backwards when you click on the respective buttons. Chat GPT was used to proofread my code.

Below is a palette of the background colors for each song and the image I used as a basis for this assignment.

The fonts I used were: Barriecito (YiPiYaY), Sedgwick Ave Display (Blue Wave), Parisienne (Daydreamin'), Macondo Swash Caps (Tunnel Vision), and Arizonia (Muñekita).
